EDUCATION

Georgia Institute of Technology

Atlanta, GA

Bachelor of Computer Engineering, Minors in AI/ML and Psychology

May 2027

- **Threads:** Distributed Systems & Software Design and Devices
- **Study Abroad:** GT Lorraine Program – Metz, France (Spring 2025)
- Faculty Honors, Dean's List, Zell Miller Scholarship

GPA: 3.75 | Major GPA: 4.0

SKILLS

Technical Skills:

- Programming Languages: Java (3+ years), Python (4+ years), C++, C, Assembly, HTML, CSS, JavaScript
- Frameworks and Tools: Git, Django, MongoDB, Node.js, Linux, Quartis Prime, ModelSim.

Relevant Coursework:

- Object-Oriented Programming, Data Structures and Algorithms, Digital System Design, GPU Programming.
- ProgrammingHardware/Software Systems, Linear Algebra, Computer Architecture, Analysis of Algorithms.

WORK EXPERIENCE

Barclays | Software Developer Internship

June 2025 - August 2025

- Completed a technical bootcamp on Docker and Kubernetes, applying containerization to streamline workflows.
- Developed a Generative AI application using LangGraph, LangChain, and FastAPI; cut average response latency by 40% and boosted data processing throughput by 3x, improving user interaction scores in testing.
- Created modular backend services using TypeScript, resulting in faster AI response times and improved reliability.

Bits Of Good | Full Stack Developer Bootcamp

August 2024 - December 2024

- Built full-stack applications with JavaScript, React, MongoDB, Express, and Next.js using RESTful APIs.
- Led and collaborated on projects, utilizing Git for version control, and presented work to demonstrate technical skills.
- Made a real-time chat app with WebSockets, improving user communication and reducing response times by 40%.

Electric ARTium Lab | Robotics Engineering Research Assistant

May 2024 - August 2024

- Integrated OpenCV into an animatronic caterpillar for real-time tracking, enabling interaction with individuals.
- Programmed a microcontroller to accurately control an animatronic caterpillar, resulting in smooth movement.
- Assembled a model to optimize caterpillar movement, cutting energy consumption by 30%.

PROJECTS

Galactica on Mbed

January 2024 - May 2024

- Created advanced gameplay features like random enemy spawning, multiple missile shooting types, and animations.
- Designed an intuitive pause screen and implemented various difficulty modes, ensuring a seamless user experience.
- Added a dynamic difficulty algorithm that adjusts to player skill, enhancing gameplay.

Chess Game Review Bot

January 2024 - April 2024

- Built a web app using APIs to integrate with chess.com, allowing users to analyze past games for strategic insights.
- Developed full-stack app with JavaScript and React for smooth game navigation and real-time move analysis.
- Produced a training module with personalized exercises, increasing user ratings by 15%.

AI Volume HandTracker

November 2023 - January 2024

- Implemented hand detection using OpenCV and Mediapipe library, enabling real-time recognition of hand-movements.
- Applied computer vision algorithms and gesture recognition techniques across 5+ experimental prototypes, strengthening technical expertise and automating 4 distinct hand gestures
- Merged hand gesture controls with media software, enabling seamless interaction.

Renewable Energy Bike

August 2023 - December 2023

- Systems Software Engineer responsible for Microcontrollers, USB Charge Controllers, and Visual display units.
- Designed and implemented an algorithm that uses a system's non-linear characteristics to improve power generation by ~50% and reduce required user input by ~10%.
- Engineered a regenerative braking system, improving energy efficiency by 10%.

ADDITIONAL

Languages: Fluent in English | Conversational Proficiency in Arabic | Read Coptic

ExtraCurriculars: OCCM - **President**, Intramural Soccer, Piano, Youth Group Leader
